I love shipping great user experiences that help users kick ass. I started as a designer but found the best way to deliver great user experiences was to build it. As a developer I built great experiences but I found the best way to deliver that was to manage a team and improve processes and make product decisions. Working software makes a compelling argument so I never really stopped coding. At Tableau I went back to engineering and we delivered good experiences there but processes, operations, and tooling were preventing us from responding to change. Seeing the challenges I sculpted my team into one that could deliver change continuously to production in an environment where that was considered impossible. The through-line is I want to deliver great user experiences quickly and sustainably and I've done what is needed to enable that.

At the moment I'm thinking hard about how to leverage agent teams to deliver great experiences safely, without amassing cognitive debt nor stressing organizational bottlenecks. If you're thinking about that too, hmu, I'd love to share notes.

Experience

Tableau / Salesforce (2020-Current)

Title: Lead Member of Technical Staff

Current Role: Lead developer for Tableau Next Metrics

- Built orchestration system for managing agents across remote workspaces. Automated processes that would take developers > 5 hours into set and forget agentic workflows that can queue spec-driven development while AFK without sacrificing visibility and control.
- Shipped Tableau Next Metric Card across 6 distribution surfaces. Deep user configuration support, responsive, multiple embedding contexts on web, Slack, and MS teams. Heavy-multi-team collaboration.
- Launched [Tableau Pulse](#)
- Acted as development lead on [Tableau Exchange](#) on web and embedded experiences.
- Shipped multiple hybrid app development on tableau desktop enabling same-day deployment of bug fixes where previous process would take months
- Delivered Angular to React migration for [Tableau Public](#)
- Led and developed the team's agile, quality, and CI/CD processes taking us from shipping our software a couple times a month to multiple times a day
- Proposed and led migration of Tableau Exchange to Next.js leading to a 50% increase on monthly active users due to improved crawlability.

Sinclair Digital (2016 - 2020)

Titles: Software Development Manager, Senior Software Engineer, Lead UX Developer, Senior UX Developer

- Managed small and large teams (4-12 people)
- Led hiring efforts of developers and testers
- Mentored developers as peer and as manager
- Organized the and led internal trainings and Developer Guild
- Architected, led, and built CMS for Tennis Channel and STIRR OTT apps.
- Led development of CMS for circa.com news app

- Led React migration of large backbone application.

Amazon.com - CS Tech (2014 - 2015)

Titles: Web Development Engineer II

- Built UI to support pallet deliveries on Amazon.com account pages.
- Added support for Amazon Business (B2B) orders to Amazon account pages.
- Created augmentations to code review software to improve adherence to guidelines and best practices.
- Active member of JavaScript Excellence Team, a virtual team that seeks to improve the craft of front end development at Amazon.

Amazon Kindle (2013 - 2014)

Titles: Web Development Engineer, Web Development Engineer II

- Implemented screen reader support for Kindle Fire and Fire Phone bookstore.
- Speaker at Amazon WebDevCon 2014.
- Developed Design System to reduce effort of annual redesigns and improve collaboration with design team.
- Performance evaluation and optimization for Kindle PaperWhite.
- Added High-dpi support Kindle PaperWhite.
- Led UI development of 2013 Kindle Fire bookstore.

Build.com (2010 - 2013)

Titles: UX Designer, Programmer

- Lead UX Designer for many internal and customer-facing projects.
- Lead developer for m.build.com
- Designed and built critical high performance frameworks for Build.com's touch optimized store fronts.
- Created UI frameworks and documentation to standardize client-side usage and ease development for both marketing and software development.
- Spearheaded efforts to improve client-side performance.
- Designed and built tools for vendor and order management.
- Championed and administered regular usability testing.
- Pioneered the use of SASS, MVCs, jQuery and JavaScript.
- Acted as local JavaScript expert for the software development and marketing departments.

Auctiva Corporation (2006 - 2010)

Titles: Web Developer, Jr. Software Engineer, Website Designer

- Championed and tutored on the use of CSS and web standards.
- Developed UI frameworks to facilitate site redesign.
- Pioneered adoption of jQuery, A/B Testing, and XSL.
- Designed and Implemented XML driven CMS using jQuery and XSL.
- Developed tools for API developers.
- Developed widgets for platform APIs.
- Developed gamification applications in Flash.
- Worked on the UI of 9 different sites

Side Projects

[foreman-lite](#)

Experimental framework where a "foreman" agent makes the orchestration decisions rather than the human. Tech: herdr, Pi, opencode

Noolang (2025-Current)

A functional, expression-based, LLM-friendly programming language designed for linear, declarative code with explicit effects and strong type inference. Tech: TS, MCP, LSP

fun-land (2021-Current)

A suite of state management and web development libraries built around functional optics. Think "what would redux be like if it allowed local reasoning with functional optics?" Tech: TS, React, FP

SpicyBrain (2022-2024)

Founder/Developer/Designer. Life Assistant AI chat app designed to assist neurodivergent people with time management and cognitive load. Implemented token streaming over SSE and custom tool-calling loops before native model tool-use APIs were available. Tech: TS, Server Sent Events(SSE), Svelte, flask, python, clojure, OpenAI and Auth0 integration

Navigation North (2012)

Contract work prototyping educational tools for the Smithsonian <https://learninglab.si.edu>. Acted as UX Designer but also did significant development using Backbone, stylus, and PHP. Also created visualization for education Common Core Standards.

Education

California State University Chico (2001-2006)

Courses taken in pursuit of BS in Applied Computer Graphics (Communication Design / Computer Science)

Skills/Tech

Frontend

- TypeScript, JavaScript
- React, Redux, etc
- Angular, Lightning Web Components (LWC)
- Next.js
- CSS-in-JS and similar frameworks
- Functional Programming
- Software Architecture
- SEO
- Screen readers and mobile and desktop.
- Canvas, SVG

Platform / Infra

- NodeJS, Bun
- Bazel
- CI/CD pipeline design
- Clojure, Flask, Python
- PostgreSQL, Docker

- Git

Agentic / AI Tooling

- Claude Code, opencode, pi, herdr, Cursor
- Custom MCPs
- Agentic workflow orchestration, multi-agent systems
- LLM API integration

Testing

- Jest, Axe
